Reference: Chemistry, manufacturing, and Controls changes to an Approved Application: Certain Biological Products Draft Guidance for Industry
Docket: FDA-1995-D-0288

Dear Sir/Madam:

PDA appreciates the opportunity to respond to the draft FDA guidance "Chemistry, manufacturing, and Controls changes to an Approved Application: Certain Biological Products." PDA applauds the incorporation of concepts from the draft ICH Q12 guidance on the topic of post-approval change into the biologics guidance paradigm, particularly language related to comparability protocols, risk-based changes, and risk management principles. PDA appreciates that the wording in the draft guidance will allow for companies demonstrating an effective Pharmaceutical Quality System to benefit from reduced regulatory reporting as per ICH Q10 Annex 1. PDA wishes to offer specific comments related to improving the usefulness of the draft guidance. Key points include:

- The scope of the guidance should include specified biological products as well as biosimilars. Using the same guidance for products with a similar risk profile will be less confusing for companies with multiple product types in their portfolio.
- The Appendix of change examples, as well as the Special Considerations section, do not reflect the paradigm of a more risk-based approach to post-approval change (see specific comments on these sections).

PDA is a non-profit international professional association of more than 10,000 individual member scientists having an interest in the fields of pharmaceutical, biological, and device manufacturing and quality. The PDA PAC iAM task force is actively involved in promoting global harmonization for post approval change reporting and implementation to address concerns of drug shortages and barriers to innovation. This website, www.pda.org/pac highlights many of the resources developed by the task force and available to the public. PDA is willing to work with FDA in this arena to further the application of risk-based approaches and full implementation of the Q8, Q9, and Q10 concepts moving towards the goal of a maximally efficient, agile, flexible pharmaceutical manufacturing sector that reliably produces high quality drugs without extensive, regulatory oversight.

Connecting People, Science and Regulation®

These comments were prepared by a committee of experts with experience in pharmaceutical manufacturing, regulatory affairs and quality including members representing the Board of Directors, the Regulatory Affairs and Quality Advisory Board, and the Post Approval Changes for Innovation and Availability of Medicines Task Force(PACiAM).

If there are any questions, please do not hesitate to contact me.

Sincerely,

A handwritten signature in black ink that reads "Richard M. Johnson". The signature is written in a cursive style with a large, prominent initial "R".

Richard Johnson
President, PDA

Food and Drug Administration Draft Guidance
CMC Changes to an Approved Application: Certain Biological Products
March 22, 2016

General Comments

| General Comments | Rationale | Critical Comment? Y/N |
|---|---|----------------------------------|
| <p>PDA recommends that the agency change the product types included in the scope of this guidance. Specifically, page 3, section III. SCOPE should be modified to add specified biological products described in 21 CFR 601.2(a) as well as biosimilar products subject to licensure under section 351(k) of the PHS Act (42 U.S.C. 262(k)). Cellular and cell-based gene therapy products should be removed from the scope and covered by a separate guideline. PDA recommends that FDA incorporate the elements from Guidance for Industry – Changes to an Approved Application for Specified Biotechnology and Specified Synthetic Biological Products (July 1997) into this draft guidance. In some cases, the guidance for specified biologics is less conservative than the provisions in the draft due to product type. These less burdensome change provisions should be included using notes if necessary to designate the types of products eligible to use them.</p> | <p>Since 1997, advances in technology have changed which product types can be considered as similar enough to utilize the same general approach to post-approval CMC changes. PDA recommends that this guidance include “specified biological products” as well as biosimilars. As the guidance is already jointly issued between CBER and CDER and some provisions in the draft exclude certain product types, this change in scope should be possible. Using the same guidance for products with a similar risk profile will be less confusing for companies with multiple product types in their portfolio. Cellular and cell-based gene therapy products are significantly different than vaccines and naturally derived products such as enzymes and should be removed from the scope.</p> | <p>Y</p> |
